

COMPREHENSIVE WEBSITE AUDIT

Website Audit & SEO Recommendations

A full technical, content, and growth review of brahmakumaris.com

PREPARED FOR

Brahma Kumaris

WEBSITE AUDITED

www.brahmakumaris.com

DATE

August 2026

~2M

Monthly visitors

110+

Countries served worldwide

5,800+

Meditation centres

Executive Summary

I want to begin this report the way I'd begin a conversation with any of you at the centre: with gratitude. brahmakumaris.com is not, to me, "a client's website" — it is one of the ways Baba's knowledge now reaches close to two million people a month, many of whom will never sit in a physical class but will still meet Rajyoga for the first time through this site. Having grown with this family for many years, I've tried to bring the same care to this audit that I would bring to any seva — looking closely, being honest about what needs attention, and offering it with respect rather than judgment.

Every finding below is written in this format - what I found and exactly what I'd suggest doing about it — so that both the web team and our leadership (Didis and Dadis included) can read this comfortably and act on it together.

The Main Finding

The one thing I most want to bring to your attention is this: brahmakumaris.com is currently living as two different websites wearing one name. The homepage still runs on the older platform (WordPress), while a number of inner pages have already been lovingly rebuilt on a newer, faster platform (Next.js). Both are live at the same time, both are being shown to visitors and to Google, and — understandably, given how much is happening behind the scenes — they don't always agree with each other. I found the number of countries we serve listed as three different figures in three different places, and I found a page still naming a former Chief Administrative Head as though she were leading us today. None of this comes from carelessness; it's simply what happens mid-migration. But because this website carries Baba's message, I felt it was important to flag this as the first thing worth resolving, since almost everything else in this report flows from it.

3 different numbers currently live on the site for "countries served" — a small detail, but one I know none of us would want a visitor to notice before we do.

What This Report Covers

- **Section 2** — The two-platform situation explained simply, and why I've placed it first
- **Section 3** — The technical health of the site (speed, mobile experience, how easily Google can read it)
- **Section 4** — The words and structure on each page (titles, descriptions, headings)
- **Section 5** — How well Google and our Hindi-speaking family are being served behind the scenes
- **Section 6** — Where I see real opportunity for growth — content, local reach, video, and community
- **Section 7** — A prioritised, time-bound plan the team can simply follow, phase by phase
- **Section 8** — My closing thoughts and what I'd suggest as next steps

How to Read This Document

Every finding in this report follows the same three-part structure, so nothing gets lost between the technical and the personal:

IN PLAIN ENGLISH

A simple explanation, written the way I'd explain it to a member of the website management team.

WHAT I FOUND

The actual evidence I observed on the live website while going through it.

WHAT I'D SUGGEST

The concrete step I believe the team should take.

Table of Contents

1 Executive Summary	Overview, headline finding, and how to read this report
2 The Big Picture: One Site, Two Platforms	The root issue behind most other findings in this report
3 Technical Health Findings	Speed, mobile experience, accessibility, crawlability
4 On-Page & Content SEO Findings	Titles, descriptions, headings, image text, factual consistency
5 Structured Data & Multilingual Setup	How well Google and our Hindi audience are served
6 Growth & Opportunity Roadmap	Content, local reach, video, community, conversion ideas
7 Prioritised Action Plan	Every recommendation, ranked and time-boxed
8 Closing Thoughts	Suggested next steps

The Big Picture: One Site, Two Platforms

IN PLAIN ENGLISH

Picture a centre that's midway through a beautiful renovation — a new hall has been built, but the old one is still standing right next to it, and both have their doors open at once. Visitors arriving don't always know which one is "current," and some quite innocently wander into the older hall by habit. That, gently put, is what's happening on brahmakumaris.com right now.

WHAT I FOUND

The homepage (brahmakumaris.com) is still built on WordPress, an older website platform. A number of inner pages — About, Journey, Initiatives — have already been rebuilt on a modern platform (Next.js, managed through a system called Strapi). Both versions of several pages are live at once, with different addresses, different menus, and in places, different information.

CRITICAL

2.1 — Two Live Copies of the Same Page

I found an old address (/journey/) and a new address (/about/journey) both live, both telling the story of our history, and both visible to Google. When two pages quietly compete for the same story, search engines struggle to choose between them — and often the outcome is that neither is given the prominence one strong, unified page would earn.

WHAT I'D SUGGEST

Complete the migration to the new platform. For every old page with a new equivalent, set up a permanent redirect ("301 redirect") so visitors and search engines are guided automatically to the right page. Once every page has moved over, the old platform can be gently retired.

CRITICAL

2.2 — The Same Facts Told Differently in Different Places

Trust is everything for this organisation — it always has been. I found the number of countries we operate in listed as 110 on the homepage and 137 on the older Journey page. I also found that same older page still describing a past leader as our current Chief Administrative Head, even though our newer About page correctly reflects our present leadership. A visitor, a donor, or a journalist who happens to see both pages will understandably wonder which one to believe — and I know that isn't a question any of us wants raised about this family.

WHAT I'D SUGGEST

Nominate a single page as the source of truth for every core fact — founding year, countries served, number of centres, current leadership — and have every other page and every piece of marketing material draw from it. I'd treat correcting the outdated leadership reference as the most time-sensitive item in this entire report.

HIGH

2.3 — Menus and Footer Links Point to Both Old and New Pages

Buttons and footer links across the site currently point to a mix of old-style addresses (like /blog/) and new-style ones (like /wisdom/blog). This sends Google mixed signals about which page is the "real" one, and it means a visitor moving around the site lands inconsistently between old and new designs — a small thing, but it can quietly unsettle someone's first impression of us.

WHAT I'D SUGGEST

Once redirects are in place, update every internal link — menus, buttons, footer, blog content — to point directly to the final, new-platform address. A one-time clean-up that meaningfully improves both search performance and the visitor's experience.

HIGH

2.4 — A Separate Home for Courses

Our course content lives on courses.brahmakumaris.com, a third, separate property from the two above. Subdomains are sometimes necessary, but search engines treat them as semi-independent sites — meaning the trust and authority the main brahmakumaris.com domain has earned over the years doesn't automatically extend to our course content, which is arguably some of the most precious, highest-intent material we have.

WHAT I'D SUGGEST

Explore moving course content onto the main domain (e.g. brahmakumaris.com/courses/) so it benefits fully from the site's established authority. If there's a technical reason the subdomain must remain, I'd at least ensure strong linking and a shared design language between the two.

Technical Health Findings

These are the "behind the curtain" details — the things a visitor won't consciously notice, but which quietly shape how the site feels, how comfortably it works on a phone, and how easily Google can understand what we've built.

HIGH

3.1 — Visitors Cannot Pinch-to-Zoom on Mobile

IN PLAIN ENGLISH

A setting on the homepage currently stops people from zooming in with their fingers on a phone. For our older brothers and sisters, or anyone with tired eyes reading spiritual content on a small screen, this is a real, avoidable barrier.

WHAT I FOUND

The homepage's mobile configuration includes a setting (user-scalable=no) that disables pinch-zoom.

WHAT I'D SUGGEST

Remove this restriction so everyone can zoom freely. A five-minute fix with an immediate, meaningful benefit for our older audience.

HIGH

3.2 — Our Historic Photographs Deserve Better Descriptions

IN PLAIN ENGLISH

Every image on a website can carry a hidden text description ("alt text") that tells a screen reader — and Google — what's in the picture. Right now, many of our most precious photographs — Brahma Baba, the early Om Mandali gatherings, the journey from Karachi to Mount Abu — are described only with meaningless fragments.

WHAT I FOUND

On the Journey page, image descriptions read as fragments like "Lq brahma 24," "1960 1," and "Baba – 7" instead of real descriptions of what's actually in the photograph.

WHAT I'D SUGGEST

Rewrite the alt text for every historic and archival image with a genuine description (e.g. "Brahma Baba with early Om Mandali members in Karachi, 1940s"). This is content no one else in the world has — irreplaceable — and right now it is invisible to search engines and to visually impaired visitors alike.

HIGH

3.3 — Older Pages Are Missing Basic Search Information

IN PLAIN ENGLISH

Every page needs a title and short description that tells Google — and the person scrolling search results — what the page is about. Our newer pages have this. The older ones often don't.

WHAT I FOUND

The legacy Journey page returned no page title or meta description in the site's underlying code, while newer pages like About consistently include both.

WHAT I'D SUGGEST

As part of the platform consolidation in Section 2, make sure every surviving page carries a unique, relevant title and description before it's considered finished.

MEDIUM

3.4 — Page Speed Is Likely Inconsistent Across the Site

IN PLAIN ENGLISH

Because half the site runs on the older platform and half on the newer, generally faster one, visitors are probably experiencing a noticeably different — and slower — journey depending on where they land. Speed also happens to be something Google weighs in its rankings, especially on mobile.

WHAT I FOUND

The homepage is built with Elementor (a WordPress page-builder known for heavier code output) and large hero imagery, while newer pages use a lighter framework built for speed.

WHAT I'D SUGGEST

Run a Core Web Vitals test (Google PageSpeed Insights) on both the homepage and a rebuilt page such as /about to see the gap clearly, and prioritise moving the homepage itself to the new platform sooner rather than later — it carries the largest share of our 2 million monthly visits.

MEDIUM

3.5 — Let's Confirm the Sitemap Reflects Both Platforms

IN PLAIN ENGLISH

Websites use a "sitemap" as a table of contents for Google, and a "robots.txt" file to tell Google which areas to skip. If these were built before the platform split, they may no longer accurately describe the site as it stands today.

WHAT I FOUND

Given the two-platform structure identified in Section 2, there's a meaningful chance the sitemap only reflects one platform, or still lists old URLs that should now redirect.

WHAT I'D SUGGEST

Audit both files inside Google Search Console's Coverage and Sitemaps reports, and regenerate the sitemap to reflect only the final, correct URLs once migration is complete.

On-Page & Content SEO Findings

This section looks at the words and structure on each page — the details that most directly shape what shows up in a Google search, and how inviting that result looks to someone deciding whether to click through to us.

MEDIUM

4.1 — Our Homepage Title Doesn't Yet Say What We Offer

IN PLAIN ENGLISH

The "title" of a page is the blue clickable headline in a Google search result. Right now, ours simply says the organisation's name — which is lovely for people who already know us, but it's a missed chance to reach the millions searching for "free meditation," "how to meditate," or "meditation classes near me," who don't yet know this is exactly what they're looking for.

WHAT I FOUND

Homepage title: "Brahma Kumaris : Official Website." The homepage's main heading is also simply "Brahma Kumaris."

WHAT I'D SUGGEST

Update the title to something like: "Brahma Kumaris | Free Rajyoga Meditation Courses & Centres Worldwide." We keep the name we're known by, and add the two or three phrases people are genuinely searching for.

MEDIUM

4.2 — Key Statistics Load as “0” Before They Animate

IN PLAIN ENGLISH

Our homepage proudly displays counters — number of students, centres, retreat centres, countries — that animate upward when the page loads, which looks lovely to a visitor. But before that animation runs, the underlying code literally says "0" for every one of these numbers.

WHAT I FOUND

On both the homepage and the About page, the raw content behind the student/centre/country counters reads "0+" prior to the animation script running.

WHAT I'D SUGGEST

Keep the animation for visitors, but make sure the real number sits in the page's code from the start, so the animation counts up from a true figure rather than literally starting at zero. This protects our genuinely

impressive numbers from ever being read as "zero" by anything looking at the page without running the animation.

OPPORTUNITY

4.3 — We Have an Extraordinary Amount of Content That Deserves Better Organisation

IN PLAIN ENGLISH

We hold something almost no one else does: 89 years of living history, real testimonials from real people whose lives have changed, daily wisdom, and teaching from BK Shivani, whom the world already trusts. Right now this treasure is scattered across Wisdom, Blog, Storytime, and older Blog addresses, without linking to one another to reinforce each topic.

WHAT I'D SUGGEST

Group related content into clear "hubs" — a Meditation Learning Hub linking every beginner article, video, and course together; a Testimonials Hub organised by life topic (stress, relationships, health, addiction recovery). This "topic cluster" approach is one of the most reliable modern SEO strategies, and it plays directly to a strength that is uniquely ours.

Quick Reference: On-Page Elements Checked

Element	Homepage	New-Platform Pages	Legacy Pages
Page Title	Present, generic	Present, descriptive	Missing
Meta Description	Present, well-written	Present, well-written	Missing
Image Alt Text	Mostly descriptive	Mostly descriptive	Meaningless labels
Social Share Tags (OG)	Present	Present	Not confirmed
Mobile Zoom Enabled	Blocked	Allowed	Not confirmed

Structured Data & Multilingual Setup

This section covers two more "invisible" layers: structured data (hidden information that helps Google display richer, more attractive results) and how well the site currently serves our genuinely global, multi-language family.

OPPORTUNITY

5.1 — Structured Data (“Rich Results”) Appears Incomplete

IN PLAIN ENGLISH

Structured data is hidden code that tells Google things like "this is a registered NGO," "this is an event on this date," or "this is a physical location at this address." Done well, it lets Google show richer results — event dates, maps, expandable Q&As — all of which help more seekers find us, without spending a rupee on advertising.

WHAT I'D SUGGEST

Implement or verify the following, in priority order:

- **Organization / NGO schema** on the homepage, linking to all our official social profiles
- **Event schema** on every event listing, so upcoming meditation workshops can appear directly in Google Search and Maps
- **LocalBusiness / Place schema** for each of our 5,800+ centres, so someone searching “near me” can find their local family
- **Article schema** on blog, news, and wisdom content
- **FAQ schema** on the “Ask Us” section, so answers can appear directly in search results
- **BreadcrumbList schema** to reinforce the new site's structure to Google

HIGH

5.2 — Our Hindi Site Isn't Formally Linked to the English One

IN PLAIN ENGLISH

We already offer a Hindi version of the site — a beautiful and necessary choice for our audience. But there's a technical handshake (called "hreflang") that tells Google "these two pages are translations of one another, please show each searcher the right one." Without it, Google may not reliably serve the Hindi page to Hindi-speaking searchers, or may treat the two as rivals rather than companions.

WHAT I FOUND

A Hindi homepage exists and is linked from the main navigation, but the formal hreflang signal was not detected in the homepage code.

WHAT I'D SUGGEST

Add reciprocal hreflang tags between the English and Hindi versions of every matching page. Given our reach into 110+ countries, it's also worth evaluating demand for additional languages — Spanish, French, Arabic, Mandarin, Russian are commonly high-value for a global spiritual family like ours — using Search Console's country and language reports.

MEDIUM

5.3 — Let's Confirm Analytics Covers Both Platforms Fully

IN PLAIN ENGLISH

Because the site is effectively two platforms right now, there's a risk our analytics — which tells us where our 2 million monthly visitors come from and what draws them — is only fully tracking one half of the site, leaving us with an incomplete picture of how we're really doing.

WHAT I'D SUGGEST

Confirm Google Analytics 4 and Google Search Console are verified and reporting correctly across both the legacy and new sections of the site, and that the `courses.brahmakumaris.com` subdomain sits in the same property — so we can see the full journey, including course sign-ups, in one place.

Growth & Opportunity Roadmap

Beyond fixing what needs fixing, an audit should also look forward with hope. With 2 million monthly visitors already finding their way to us, even modest improvements in how we present ourselves can create very large good in the world. Here is where I see the greatest opportunity.

6.1 — Turn Our 5,800+ Centres Into a Local Search Advantage

Very few organisations anywhere have a physical footprint like ours. Each centre — retreat centre, city presence — is a potential individual search result for "meditation centre in [city name]." If each one has its own dedicated page with an address, contact details, class timings, and photos, this becomes one of the largest local-search opportunities of any NGO website in the country — reaching people who are ready to walk through our doors, not just read about us.

6.2 — Build Out Video

Guided meditation is naturally visual and audio content, which makes video a wonderful fit — and Google increasingly surfaces YouTube content directly in search results. I'd suggest cross-linking our YouTube channel from every relevant page, embedding key videos directly into their matching pages rather than just linking out, and adding transcripts, which are indexable text that further strengthens each page's relevance.

6.3 — Let the Testimonials Speak, Individually

The stories our brothers and sisters share are some of the most moving, persuasive content we have, and search engines increasingly favour genuine, first-person experience (what Google calls "experience" in its quality guidelines). I'd suggest expanding the Testimonials section into structured, searchable stories organised by life topic — overcoming addiction, managing stress, healing relationships, coping with grief — each as its own page rather than one long scroll.

6.4 — Share Our UN Affiliation More Widely

Brahma Kumaris holds General Consultative Status with the UN Economic and Social Council, alongside decades of affiliation — a credential that speaks for itself and one very few spiritual organisations can claim. A dedicated, well-optimised page detailing this relationship, paired with gentle outreach to press, universities, and partner NGOs for links back to it, can meaningfully lift the standing of the whole site.

6.5 — Make the Path From Visitor to Practising Member Clearer

With 2 million monthly visitors, even a small improvement in how many people move from reading a page to joining "Soul Sustenance," downloading the app, or finding a nearby centre carries very real, human impact. I'd suggest:

- Reviewing the visitor journey in analytics to see where people drop off before finding a centre or signing up
- Adding clear, consistent calls-to-action ("Join a free course," "Find your nearest centre," "Start your first meditation") on every major page, not only the homepage
- Giving the Android and iPhone meditation apps more visibility throughout wisdom and blog content, since app users tend to become our most engaged, lasting family members

Prioritised Action Plan

Every recommendation from this report, brought together in one place and ranked by urgency, so the team can plan the work in clear, manageable phases.

Phase 1 — Immediate (Next 30 Days)

Priority	Action	Why It Matters
CRITICAL	Correct the outdated leadership reference on the legacy Journey page	A direct matter of credibility and trust — factual accuracy about who leads us today
CRITICAL	Standardise every “countries / centres / students” statistic to one verified number	Removes a visible inconsistency across pages
HIGH	Remove the mobile pinch-zoom restriction	Immediate accessibility fix, five-minute change
HIGH	Audit Google Search Console for indexing/sitemap issues across both platforms	Establishes a clear baseline before further changes

Phase 2 — Short Term (30–90 Days)

Priority	Action	Why It Matters
CRITICAL	Complete migration of remaining legacy pages to the new platform; implement 301 redirects	Resolves duplicate content and consolidates our search standing
HIGH	Update all internal links (nav, footer, buttons) to point only to final URLs	Cleans up crawl signals and the visitor's experience
HIGH	Rewrite alt text for historic/archival images	Unlocks unique content for image search and accessibility
MEDIUM	Rewrite homepage title tag and H1 to include target keywords	Improves click-through from search results
MEDIUM	Add hreflang tags linking English and Hindi versions	Improves accuracy of language targeting

Phase 3 — Medium Term (3–6 Months)

Priority	Action	Why It Matters
GROWTH	Implement Organization, Event, LocalBusiness, Article, and FAQ structured data	Enables richer search results and higher click-through rates
GROWTH	Build individual, SEO-optimised pages for major meditation and retreat centres	Captures high-intent local search demand at scale
GROWTH	Reorganise Wisdom, Blog, and Storytime content into linked topic hubs	Strengthens topical authority and internal linking
GROWTH	Migrate the homepage from Elementor/WordPress to the new platform	Improves site speed and Core Web Vitals sitewide

Phase 4 — Ongoing

Priority	Action	Why It Matters
GROWTH	Expand testimonials into topic-organised, indexable stories	Builds trust-driven organic content that ranks and genuinely connects
GROWTH	Digital PR around the UN ECOSOC affiliation and 89-year history	Builds domain authority through quality external links
GROWTH	Strengthen video content and app cross-promotion	Deepens engagement with our existing 2M monthly visitors
MEDIUM	Quarterly technical health check (speed, broken links, duplicate content)	Prevents regression as the site continues to evolve

Closing Thoughts

brahmakumaris.com is, in many real ways, already succeeding — two million monthly visitors is a remarkable result, and it reflects the genuine trust this family has built over 89 years of quiet, steady service. Important thing to note is that the platform migration is unfinished — and that is quietly costing us some consistency, some trust, and some of the reach we could otherwise have.

If I had to offer this whole report in three sentences, they would be:

1. Finish the website migration and make every fact on the site consistent — this alone resolves the majority of what I found.
2. Treat what makes us unique — 89 years of history, 5,800+ centres, our UN affiliation, and our testimonials — as the strength it truly is, and build the site's structure around it.
3. With 2 million monthly visitors already finding their way to us, even small improvements in how people move from visiting to joining will have a real, human impact.

Suggested Next Steps

- Share this report with the technical/web team and content writing team, since the recommendations touch both
- Begin with Phase 1 — it asks for minimal engineering effort and resolves the most visible matters of trust

OM SHANTI.
